

Topic:-

Prepare a power point presentation on awareness about tobacco consumption and cancer and present it in the class.

Introduction:-

Tobacco consumption is a global public health issue, and it is essential to raise awareness about its harmful effects on health.

Further through this presentation will learn more about harmful effects of tobacco consumption and preventions. it's prevention.

Tobacco is a dangerous habit that affects millions of people around the world. Many people start it out of curiosity or pressure, but later find it hard to stop. It slowly harms the body and can lead to serious illnesses like cancer. The harmful substances present in tobacco damage important organs and reduce life quality. Creating awareness about its bad effects is very important, especially among students and young people, so they can make better and healthier choices in life.

•Here are some key points to keep in mind:

Above picture are representational image of various cancer.

Tobacco contains harmful chemicals: Tobacco contains over 7,000 chemicals, many of which are toxic and can cause cancer. The most well-known toxic chemicals in tobacco are nicotine, tar, and carbon monoxide.

Tobacco use increases the risk of cancer: Tobacco use is a leading cause of many types of cancer, including lung, throat, mouth, bladder, kidney, and pancreatic cancer. It also increases the risk of heart disease, stroke, and respiratory illnesses.

Secondhand smoke is also harmful:-

Secondhand smoke, which is the smoke exhaled by a smoker or from a burning cigarette or other tobacco product, is also harmful. It can cause the same health problems as smoking, including cancer and heart disease.

Quitting smoking can improve health:-

Quitting smoking can reduce the risk of developing many health problems and can improve overall health. It is never too late to quit smoking, and there are many resources available to help people quit, such as nicotine replacement therapy, prescription medications, and support groups.

Prevention is key:-

The best way to prevent tobacco-related health problems is to never start smoking or using tobacco products in the first place. Education and awareness campaigns can help prevent people from starting to smoke, and laws and regulations can help reduce exposure to secondhand smoke.

Disadvantages of Tobacco Consumption:-

- Causes serious diseases like cancer (lungs, mouth, throat).
- Leads to addiction due to nicotine.
- Damages lungs and causes breathing problems.
- Increases risk of heart disease and stroke.
- Reduces physical fitness and stamina.
- Affects oral health (bad breath, tooth decay, gum disease).
- Harmful to non-smokers (passive smoking).
- Wastes money on harmful products.
- Reduces life expectancy.
- Pollutes environment (cigarette butts and smoke).

Conclusion:-

Overall, Tobacco is a silent killer that slowly damages our body and can lead to serious diseases like cancer. Many people start using it without understanding its harmful effects, but quitting is not easy once addicted. Awareness is the strongest weapon to fight this problem. By making the right choices and spreading knowledge, we can protect ourselves and others. A healthy life is a real wealth, so we should say no to tobacco and yes to a better future.

Powerful Slogans:-

-  Say NO to tobacco, say YES to life.
-  Tobacco kills, don't let it win.
-  Be smart, don't start.
-  Life is precious, don't waste it on tobacco.
-  Quit today for a healthier tomorrow.
-  Don't let tobacco control your life.
-  Choose health over addiction.
-  Stop tobacco before it stops you.
